The #1 Name for In-Vessel Composting

BIOvator®

Let the revolutionary **BIOvator™** in-vessel composter put control of organic waste and mortality management back into your hands.

Since its introduction to the market in 2004, the **BIOvator™** in-vessel composter has become a widely recognized product of choice for organic waste and animal mortality management. For good reason: Incineration is costly and high-maintenance, rendering carries environmental and regulatory risk, and compost buildings require intensive labour and use of space.

The **BIOvator™** provides a cost-efficient and environmentally sound solution to organic waste management, and virtually eliminates biosecurity risks of mortality management and reduces many of the concerns associated with more traditional methods of disposal.

BIOvator™ - THE ONLY NAME YOU WANT

The **BIOvator™** is the only all-steel, in-vessel composter on the market in successful operation in more than 150 locations throughout Canada and the US. Free of any plastic drum material that can warp and

wear, choose the tested and proven steel **BIOvator™** for unmatched durability and function.

ENVIRONMENTALLY FRIENDLY

BIOvator™ eliminates leaching and ground contamination, recycles barn air when used with a cold climate hoarding system, reuses finished compost to replace part of new shavings, and reduces energy consumption.

HIGHLY AUTOMATED FUNCTIONING

The **BIOvator™** is easy to operate. Simply load organic waste and/or carcasses and shavings into the vessel, turn it on for a few hours daily, and let nature do the rest for you.

This reduces employee-operating time to achieve the desired composting results. It operates year round.

BIOSECURE

Third party pick-ups always carry risk of cross-

contamination, the **BIOvator™** allows you to control your mortalities on-site, eliminating the risk of disease in your healthy animals.

The mortalities are fully enclosed, so you will virtually eliminate intrusion of wildlife, insects, and rodents.

FAST AND EFFECTIVE

The **BIOvator™** is a continuous operation where waste is processed into compost in 4 to 14 days, compared to traditional composting methods which can take up to a year.

You greatly reduce risk of disease-causing organisms and odour. And it uses half the shavings required for bin composting.

HIGH QUALITY COMPOST

As a bonus, the **BIOvator™** produces high and consistent quality compost that can be used as a soil enhancer, fertilizer, bedding material, and to control soil erosion of lagoon banks.

Model	Measures (m)	Daily Capacity (kg)
BIO442	12,80 x 1,20	225
BIO430	9,10 x 1,20	160
BIO418	5,50 x 1,20	80
BIO316	4,90 x 0,90	55
BIO308	2,45 x 0,90	27
